Product Description

Water Level Controller Reaction Vessel Interface Resistance Welding Interface

It consists of superior quality components. It works very accurately. As the water approaches to the top level of water tank it stops the motor. Similarly when the water goes down to lower level it automatically starts the motor. We have a wide range of water level controllers for domestic as well as industrial. The device is available for both single phase as well as three phase motors.

Features:

- Easy to operate
- Low maintenance
- Seamless performance

Use:

Used to stop overflow of water from the over head tank or dry running of pump there by saves electricity and water
